PROFESSIONAL SUMMARY

Senior Frontend Engineer and Tech Lead with 6+ years delivering scalable Angular (2-20) applications, component-driven architectures, and AI-assisted development workflows across fintech and enterprise domains. Full-stack capable across Node.js, Express.js, PostgreSQL, Redis, and Kafka-based event-driven systems, with hands-on experience designing REST APIs, caching layers, and asynchronous messaging pipelines. Expert in TypeScript, RxJS, NgRx, and LLM API integration, with proven ability to build full-stack and AI-powered products end to end. Experienced team leader with a track record of reducing technical debt, shipping critical modules on deadline, and establishing AI-augmented coding practices using tools such as Cursor IDE, n8n, and multi-model inference pipelines. Targeting Senior Frontend Engineer, Full Stack Engineer, Tech Lead, or AI Builder roles.

CORE COMPETENCIES

Frontend: Angular 2-20 (Signals, Zone-less, Standalone Components), TypeScript, JavaScript (ES6+), RxJS, NgRx, NGXS, HTML5, CSS3, SCSS/SASS, Tailwind CSS, Progressive Web Apps (PWA)

Backend and Full Stack: Node.js, Express.js, REST API Design, PostgreSQL, MongoDB, Redis (caching, pub/sub, session stores), Apache Kafka (event streaming, producer/consumer pipelines), WebSockets, Microservices Architecture, Nginx, PM2, Linux server administration

AI and LLM Tooling: LLM API Integration (Anthropic Claude API, Groq, Cerebras), Prompt Engineering, AI Agent Orchestration, n8n Workflow Automation, AI-Assisted Development (Cursor IDE), Multi-Model Inference Routing

Architecture and DevOps: NRWL/NX Monorepo, Docker, Webpack, Babel, Angular Material, Oracle Cloud Infrastructure (OCI), Cloudflare Tunnels, GitLab CI/CD Pipelines, Git, Bitbucket

Testing and Quality: JEST, Karma, Mocha, Jasmine, SonarQube, Checkmarx, Code Reviews, Agile/Scrum, JIRA

WORK EXPERIENCE

Trustt (formerly Novopay) (Payroll - CIEL HR Services | Bangalore, India

Software Development Engineer II — Frontend Lead07/2023 – Present

- Led a 5-member frontend engineering team delivering a fintech platform serving 1,000+ banking agents; reduced page load time by 25% through lazy loading, OnPush change detection, and bundle optimization.
- Spearheaded Angular migration from v9 to v19/20, introducing standalone components, Signals-based state management, and zone-less architecture — reducing technical debt by 30% and cutting deployment cycle time by 15%.
- Designed and maintained an AI Code Generation Framework (Cursor IDE + .cursor rules) defining an 8-step feature registration workflow, reusable base component patterns, SCSS libraries, and permission systems — accelerating team feature delivery velocity by approximately 35%.
- Owned end-to-end implementation of product epics and feature flows across the fintech platform — translating business requirements into Angular modules, defining component architecture, and coordinating backend API contracts (Node.js/Express, REST) with the platform's PostgreSQL-backed services to deliver features on schedule.
- Enforced code quality via SonarQube and Checkmarx; resolved 50+ production-critical bugs, cutting average incident resolution time from 48 hours to under 12 hours.

Transtech Solutions | Hyderabad / Remote

Software Engineer — Frontend / Angular Developer04/2019 – 06/2023

- Delivered production-grade Angular SPAs and Progressive Web Apps (PWAs) for 3 enterprise clients (CompuCom, AIG, Ciel HR) using Angular 9-13, TypeScript, NgRx, NGXS, and ForgeRock authentication.
- Built NextGen Portal for CompuCom: Angular 13 B2B/B2C full stack platform for device and service management, increasing user engagement by 40% and reducing bug rate by 30% via REST API and WebSocket integrations.
- Built Insurance Portal for AIG: Angular 11 monorepo handling 10,000+ monthly applications; improved application completion rate by 35% and reduced build times by 20% using NRWL/NX monorepo architecture.
- Implemented GitLab CI/CD pipelines and JIRA Agile tracking, and ensured WCAG 2.1 AA accessibility compliance across all portal components.

- Awarded Spot-On Award for exceptional delivery quality and client satisfaction across multiple high-visibility enterprise projects.

NOTABLE PROJECTS

AI Code Generation Framework (Trustt)

Designed a Cursor IDE rule system with a 10-phase AI-assisted development workflow, reusable Angular component guides, SCSS pattern libraries, and automated feature registration — adopted as the team standard for AI-augmented Angular development.

LLM-Powered Job Intelligence System (Personal Project)

Built a Python and Node.js pipeline leveraging Groq and Cerebras LLMs to parse job descriptions, score candidate fit using NLP, and deliver ranked alerts, with PostgreSQL for persistent storage and Redis for caching scored results — applying AI agent orchestration and multi-model inference routing end to end.

Cloud-Native AI Automation Portfolio (akhileshnanda.maya-ai.dev)

Full-stack Node.js and LLM API platform deployed on Oracle Cloud Infrastructure (OCI) with a PostgreSQL data layer, Redis-backed caching and session management, Kafka-style event pipelines for real-time notifications, and n8n workflow automation — demonstrating end-to-end full-stack and AI builder capabilities.

EDUCATION

GITAM School of Technology | Bangalore, India

Bachelor of Technology (B.Tech), Mechanical Engineering | CGPA: 7.26 / 10.0 | 2014 – 2018
